GUIDANCE, ADVICE & AFTERCARE

When it comes to commercial or industrial roller shutter or sectional doors, Bond Engineering specialise in the provision of tailored door solutions. Whether relating to installation, service or maintenance, Bond Engineering operates in a truly consultative capacity with clients to deliver optimum solutions designed to meet their every need.

Drawing on over 26 years' experience of operating in the commercial and industrial door industry sector, Bond Engineering is well placed to partner with clients as a means of ensuring that they receive complete peace of mind. Because let's not forget, not only does it make perfect sense to keep door equipment in excellent working order, there is also a **LEGAL OBLIGATION** to do so!!!!

DON'T MAKE IT AN EMERGENCY!

Did you know that employers have a legal obligation to ensure that industrial and commercial doors are properly maintained and serviced? The workplace (Health, Safety & Welfare) Regulations 1992 stipulate that all work places must comply with the regulations as presented. Specifically, regulation 18 relates to the condition of doors and gates in the workplace, including provisions about safety devices on electrically operated doors.

Furthermore, Regulation 5 lays down the following requirements for equipment in the workplace, including doors:

1) The workplace and the equipment, devices and systems to which this regulation applies, shall be maintained (including cleaning as appropriate) in an efficient state, in efficient working order and in good repair.

2) Where appropriate, the equipment, devices and systems to which this regulation applies, shall be subject to a suitable system of maintenance.

But that's not all; regulation 5 2) requires a system of maintenance that ensures:

- a) Regular maintenance, including as necessary, inspection, testing, adjustment, lubrication and cleaning is carried out at suitable intervals
- b) Any potentially dangerous defect is remedied and that access to the defective equipment is prevented in the meantime.
- c) Regular maintenance and remedial work is carried out properly; and
- d) A suitable record is kept to ensure the system is properly implemented and to assist in validating maintenance programmes.

Our word is our bond

PREVENTION IS BETTER THAN CURE!

Should an industrial door fail, it is important to remember that it can leave you facing several, and often-avoidable, problems:

- A safety hazard
- Costly downtime and often an interruption to operations
- Cost of emergency (rather than planned) call outs and repairs

PRO-ACTIVE, EFFECTIVE & EFFICIENT SERVICE PROVISION

Bond Engineering offers clients a comprehensive service and maintenance package that is focused on ensuring door and shutter equipment not only meets all relevant Health and Safety requirements, but is also closely monitored as a means of reducing the risk of 'surprise' failure.

The package includes:

- Six monthly service visits/inspections
- Full service provision
- Lubrification and adjustment of all moving parts, as necessary
- Checking of operating mechanisms and safety features
- Provision of engineer's report on condition, including any defect requiring attention
